

Ficus "Flash"

Bay Road Nursery Screening Collection

Features:

We love the new Ficus Flash. Its main feature is bright green evergreen glossy leaves. Ficus Flash is extremely clean with no flowers or fruit to drop and, when kept moist in summer, barely drops a leaf. For this reason we use it extensively next to pools. Another feature is that even unclipped it still makes a dense, green screen that does not get too big. So it can be very low maintenance. As you can see from the picture above they develop a 70cm trunk and pleach naturally.

Are the roots huge?

In our experience, when clipped to a screen of 2 - 3m height and kept 1m thick the plant has no need for a large root system and is fine next to pools and in narrow beds.
