

Waterhousea "Warner's Select"

Bay Road Nursery Screening Collection

Features:

This is the best looking of the Lilly Pilly family and one of our favourite screening plants for the Bayside area. A superb, glossy, green foliaged, native screening plant that can be clipped to any size. Waterhousea are fast growing with a weeping habit and pink/red new growth in spring. It grows well in sandy soils, tolerates full sun or part shade and suits the look for most gardens. Unclipped it can grow into a large plant.

Care:

Take advantage of our maintenance service to keep them clipped to their best! Deep summer watering will help keep them thick and bushy. Spring to encourage dense habit. Use a fertiliser formulated for natives according to manufacturer's directions.
